TECHNICAL SKILLS

Security Operations & Detection Engineering: SIEM design and monitoring (Wazuh, custom-built platform), stateful detection rule engineering (brute force, SQL injection, path traversal), threat intelligence enrichment (AbuseIPDB, VirusTotal), incident triage and root cause investigation, MITRE ATT&CK mapping

Identity & Microsoft Security: Active Directory, Entra ID, Conditional Access, MFA, Intune, Group Policy, least-privilege access design, applied ASD Essential Eight in a live production environment, hands-on Microsoft Sentinel exposure via a self-directed trial environment and KQL query writing

DevSecOps & Automation: CI/CD security pipelines (GitHub Actions), SAST (Bandit), SCA/dependency scanning (Safety), DAST (OWASP ZAP), Python, PowerShell, Bash automation, Docker

Networking & Systems: TCP/IP, DNS, DHCP, VPN, Windows Server, Linux, network troubleshooting and root cause investigation

Frameworks & Compliance: ASD Essential Eight, NIST CSF, ISO 27001 concepts, OWASP Top 10

Certifications: CompTIA Security+ (2025), ISC2 Certified in Cybersecurity CC (2023)

WORK EXPERIENCE

Software Developer | Cybercore Solutions

January 2025 – Present

Sydney, NSW (Hybrid)

- Builds Python and PowerShell security automation tooling, improving logging, auditability, and structured data collection across internal systems.
- Containerises services using Docker, ensuring consistent, repeatable deployments.
- Writes incident response runbooks and technical documentation, translating complex detail for non-technical stakeholders.
- Delivers automation projects end to end, gathering requirements directly from engineering and operations stakeholders and confirming outcomes before sign-off.

IT Support Engineer | Labourpower

May 2024 – December 2024

Sydney, NSW

- First point of contact for L1/L2 IT support across approximately 100 users, achieving an 80% first-contact resolution rate.
- Administered Active Directory, Entra ID, Intune, and Conditional Access, enforcing least-privilege access aligned to the ASD Essential Eight in a live production environment.
- Administered SAP S/4HANA for user management, role assignment, and asset management.
- Ran phishing simulation campaigns and delivered security awareness training to staff, analysing behavioural trends and contributing to a measurable reduction in repeat incidents.
- Diagnosed and resolved network connectivity issues (DNS, DHCP, TCP/IP, VPN) across the business.
- Monitored and responded to security incidents, triaging by risk and documenting findings for escalation and audit.

Software Developer Intern | Zonda

October 2023 – March 2024

Sydney, NSW

- Automated help desk workflows using Python and PowerShell, cutting average resolution time by 15%.
- Monitored authentication and security event logs, identified anomalous login patterns, and reported findings with recommendations.
- Embedded security validation checks into internal web applications, proactively catching misconfigurations before production.
- Independently deployed a personal web application on AWS using EC2 and S3, implementing user authentication with role-based access control.

EDUCATION

Bachelor of Computer Science (Security Engineering) | UNSW Sydney*February 2021 – March 2025*

- Relevant coursework: Security Engineering and Cyber Security, Web Application Security and Testing, Digital Forensics, System and Software Security Assessment, Networking Fundamentals, Software Engineering, Database Systems.
- Certifications: CompTIA Security+ (2025), ISC2 Certified in Cybersecurity CC (2023).

PROJECTS

SentryNode – Home-Built SIEM Engine | [GitHub](#) (FastAPI, Docker, Elasticsearch, Redis, Grafana, InfluxDB, RabbitMQ)

- Distributed threat detection platform built solo, end to end. Real detection rules: stateful SSH brute-force detection using a sliding time window, SQL injection detection against URL-decoded payloads, path traversal, and HTTP auth brute-force detection. Redis-cached AbuseIPDB threat intelligence enrichment with proper fallback handling. Backed by 1,100+ lines of genuine automated tests. Refactored the RabbitMQ message queue mid-build after discovering it couldn't handle a load spike without dropping events.

Wazuh Home SIEM/XDR Lab | [GitHub](#) (VMware, Windows, Linux, Kali, Wazuh, VirusTotal)

- Multi-endpoint SOC lab across Windows, Linux, and Kali on VMware. Real-time File Integrity Monitoring with VirusTotal enrichment automatically triggering Active Response quarantine. Detected activity mapped to MITRE ATT&CK tactics including Defense Evasion, Privilege Escalation, and Initial Access, evidenced with real dashboard screenshots.

Gatekeeper – DevSecOps Security Pipeline | [GitHub](#) (GitHub Actions, Bandit, Safety, OWASP ZAP)

- Automated CI/CD security gate embedding SAST, dependency/CVE scanning, and DAST directly into the delivery pipeline. Fails the build on any HIGH severity Bandit finding or known Safety CVE; MEDIUM findings are logged for visibility without blocking delivery. Includes a genuine 600-line HTML dashboard generator for structured remediation reporting.

EXTRACURRICULAR

- CTF (Capture the Flag) competitions, ongoing, self-directed.
- UNSW Computer Science Society, hackathon participant, led a small team to deliver a working prototype under a tight deadline.
